Microbiological Testing Kit
Patent No. 141361
PCRWR's microbiology testing kit is easy to use. Through this kit water test may be performed at an affordable price in field or at home even without incubator.

Arsenic Testing Kit
Patent No. 141362
Excessive intake of arsenic through contaminated ground water beyond the safe limit of 10 ppb may result in serious health impacts including cancer. Due to lack of arsenic testing facility in remote areas of Pakistan, people may unknowingly drink arsenic contaminated water. To bridge this gap, PCRWR has developed a field testing kit for arsenic. This kit can test 100 water samples and provides test results in the range of 0-250 ppb.

Mehfooz Pani Disinfection Tablets
Mehfooz Pani ® disinfection tablets are used to treat microbial contamination. These are available in a pack of 30 tablets, where one tablet is sufficient for treatment of 20 litres of water in 30 minutes. These tablets may be used in water cooler/can/bottle and Safe Water Filter manufactured by PCRWR.

Unavailable in stock and order can be placed for bulk with delivery time of 8 weeks
Price List of PCRWR's Water Testing and Treatment Products

**Mehfooz Pani Water disinfection tablets**

Mehfooz Pani ® disinfection tablets are chlorine tablets used to treat microbial contamination in 500 gallon of water. They are available in a pack of 10 tablets, where one tablet is sufficient for a single treatment. These tablets can be used in concrete, ceramic, fibre glass, PVC water tanks.

*Unavailable in stock and order can be placed for bulk with delivery time of 8 weeks*

**DWATS-I Sachet**

Drinking Water Treatment Sachet-I (DEWATS-I) contains 8 g mixture with capacity to treat bacterial contaminants and turbidity in 25 litres of water. This sachet may be used to treat highly turbid water at household level in any water container or Safe Water Filter of PCRWR.

*Unavailable in stock and order can be placed for bulk with delivery time of 8 weeks*

**DWATS-II Sachet**

Drinking Water Treatment Sachet-II (DEWATS-II) contains 9 ml liquid with capacity to treat arsenic, bacterial contaminants and turbidity in 18 litres of water. This sachet is used in combination with Safe Water Filter of PCRWR.

*Unavailable in stock and order can be placed for bulk with delivery time of 8 weeks*

**Safe Water Filter**  
**Patent No. 141360**

PCRWR's Safe water filter has multiple uses and can be used as treatment apparatus for removal of bacteria, turbidity and arsenic by adding PCRWR’s DEWATS-I or II Sachet, Mehfooz Pani® tablets or Chlorine granules. Water along with one of these products is added into top chamber having 18 litres capacity. Treated water filters out through ceramic cartridge into lower chamber and then used for drinking purpose.
